

Part 12. Compare the RNA-Seq Samples Within the Group

Student	Accession	Condition	Reads	Read length	GC %	Main QC observation
Obiñeta	SRR23869388	Control — 0h salt stress	28,209,473	101 bp	45%	Good quality, adapter-trimmed, uniform base composition; no major bias
Suan	SRR23869373	Treatment — 6h salt stress	28,211,353	101 bp	43-44%	Comparable to control; R2 has minor poly-G artifact (0.24%); all critical metrics pass
Batigulao	SRR23869383	Treatment — 24h salt stress	31,558,920	101 bp	45-46%	Main QC Observation: Approximately 45–46% of the reads passed the quality control, indicating moderate read quality. Further trimming and filtering may be needed before downstream analysis
Pasculado	SRR23869379	Treatment — 48h salt stress	31,549,121	101 bp	43-44%	Good overall quality with 31.5M reads and 43–44% GC, but FastQC showed per-base sequence content failure and a GC-content warning in R2
